THE UNIVERSE

RICHARD OSBORNE

MARKETING & SALES POINTS

Topical philosophical and astronomical study of the universe

A great read for non-specialists and experts alike

The Universe explained, condensed and exploded

A convenient and readable antidote to Stephen Hawking

By the best selling author of *Megawords* and *Philosophy for Beginners*

Convenient catalogue of references and websites

Part of the Pocket Essentials series providing in depth overviews of complex subject matters

THE BOOK

The single biggest and most difficult question that exists? From early religions through Greek Philosophy and Western Science, man has attempted to discover the meaning of the Universe and our place within it.

In the last twenty year these debates have all been stood on their head by amazing discoveries, big bang theory and ideas about new sub-atomic layers. The nature of Time and Space are truly up for grabs.

With a witty and accessible style Osborne leads us on a historical and informative adventure through the philosophies of the universe; including the importance of telescopes, mathematics and relativity theory and ending with contemporary mind-expanding concepts such as the reversibility of time and parallel universes.

PRAISE FOR RICHARD OSBORNE

'If it's true that very few of the many thousands who bought Stephen Hawkins' 'A Brief History of Time' actually read it, then Osborne's may be the book to catch up with. Certainly, this reviewer ended the book a good deal wiser' - Financial Times
'The perfect introduction for those who would like to understand the vast space that is our universe' - The Good Book Guide

RICHARD OSBORNE

Richard Osborne is the author of the internationally bestselling *Philosophy for Beginners* and the guide to all things cultural, *Megawords*.
